Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with cascade canister filter 1000 manual . To get started finding cascade canister filter 1000 manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

Book Descriptions:

cascade canister filter 1000 manual

I bought a used Cascade 500 filter which needed cleaning after 2 months and Please read all sections of this manual and retain for future reference. Installation fryer, Super Cascade Filter system, and H250 gas fryers with Solid. Detailed instructions for Cascade brand filters.Reload to refresh your session. Reload to refresh your session. For a better experience, please enable JavaScript in your browser before proceeding. It may not display this or other websites correctly. You should upgrade or use an alternative browser. Anyway, I just looked through the box and it didnt come with a manual. I have never worked with a canister filter before, so this is completely new to me. Does anyone know where I can get a copy of the manual for this filter. I tried googling it, but didnt come up with anything I could use. Thanks!! They give an email address and telephone number, but their instruction link requires a login. See if they can either send you a manual or allow access to their instruction area to help you. They give an email address and telephone number, but their instruction link requires a login. See if they can either send you a manual or allow access to their instruction area to help you.I did it and was able to find the filter manual. Looks like quite a bit of detail too. Its a small review with pictures for the slightly smaller 700 series. My only real issue with setting this thing up is that I cant for the life of me figure out how to open the locking clips. I can one set of them open, but the other set is turning out to be a bit harder. That second set is laughing at me, I swear. I know it opens, though, cuz the people I bought it from said that they cleaned out the inside while they were making sure it worked. Im sure Shawnie will be posting and be able to tell you exactly what to do seeing as she owns one. Im sure Shawnie will be posting and be able to tell you exactly what to do seeing as she owns one.SQUEE!! lol Oh, wow!<https://www.eldynegroup.com/userfiles/bounty-hunter-quick-draw-2-user-manual.xml>

This thing seriously needs to be cleaned. Looks like the kid used it for saltwater for a while, but let the water evaporate out of the filter instead of dumping it and cleaning it. Theres even a butterfly wing in one of the media trays. Oh, well, the adventure begins! Do I need the floss pad that is indicated in the instructions. I know I can get regular filter floss and use that, but could I just use clean cotton batting instead I think Ive heard somewhere of using cotton batting instead of filter floss as a cheaper alternative. Also, I want to keep the cycle going on the 55gal when I add this filter. Should I continue to run the Penguin 170 I have on there, or should I just put the media from the 170 into one of the media baskets on the Cascade. Thanks for all the help!! Ours not cascade will make a little mess when disconnecting the hoses but nothing a small dish towel cant handle. Ours not cascade will make a little mess when disconnecting the hoses but nothing a small dish towel cant handle.I have four tanks running at the moment and as soon as the 55gal gets mostly finished basically, as soon as I get this filter on it, Im setting up a 29gal paludarium for my son in his room. And YAY about being able to use the batting and fiber fill.Makes me wish I would have shopped around a little more for ours. Too bad you werent closer, I could have donated an entire setup! I would much prefer to have one high wattage fixture preferably a T5, but they arent very common

around here. Anyway, back to the filter. I think I'm going to run the spray bar instead of the directional nozzle output thingy. Mainly because the directional output is MIA. Which part is diy co2 injector That's what I had set up before I got the 55gal. Yes, my CO2 injector is going to be a DIY unit. as soon as I can find a 2 litre bottle or two. I don't drink soda and neither do my parents. I think I'm going to run the spray bar instead of the directional nozzle output thingy. <http://garagedeur.com/admin/userfiles/bounty-hunter-quick-draw-ii-owners-manual.xml>

Mainly because the directional output is MIA. Wish me luck! The elbow tube set is incomplete. The U-bend tube is there, but he put in a straight tube instead of the gently curved one I need to attach the spray bar so it isn't vertical. Do you think I could find a similar tube at a hardware store. Also, the media cartridge from my Penguin 170 was too big to actually fit IN the media basket on the Cascade. Would it be okay sitting on top, or should I just use the one out of the AquaTech 515 I had running on there as well which mysteriously stopped working. I am having the worst luck today!. I give up!! I can't get the darned thing to create suction. I removed the impeller retainer ring to take a look at it and it appears warped. Could this be part of the cause I am seriously with this thing right now had some issues getting fittings to go onto pipes, as well. AND, I edit yet again. ROFL! I got the filter working. Woot! I had to trim the hoses and then primed the pump with the valves closed and primed it until no more air bubbles came out of the output, but it fired right up as soon as I plugged it in. YAY! So, now all I have to do is get the elbow pipe I need to set up the spray bar and well be golden. Considered a market leader, PennPlax is a trustworthy brand that has been providing well designed, sturdy, innovative yet affordable products to aquarists, since its inception in 1956. One of their most popular aquarium filters, is the Penn Plax Cascade 1000 canister filter. It is a sturdy, reliable filter that sits under your aquarium tank and gives you one of the quietest experiences you will have with a canister filter. Here's a quick look at the specifications of the Penn Plax Cascade 1000 canister aquarium filter. This is more than just a good looking filter, with its stellar features that make it easy to install, start and maintain, giving you a tank full of clean, pure water that is continuously being filtered.

In addition, placement is no worry for this canister, thanks to its independent directional 360 degree rotating valve taps. Features There's more to this product than just this one feature, and here's a sneak peek into what else there's to love about the Penn Plax Cascade 1000 canister filter Enhanced Flow Control The Penn Plax Cascade 1000 canister filter has more than one feature that allows you to control the flow of clean water to your aquarium tank, starting with the flow rate control valves, which allow you to determine and set the flow of water as per the needs of your aquarium. This feature gets even better thanks to the swimming pool style hose clamps which make it easier to maintain the flow you've set without having to come back and check the filter frequently for consistent water flow. This means that you never have to worry about water flowing too quickly into your tank and upsetting the gentle, tranquil environment that some fish may need to thrive. 3 Stage Filtration System The Penn Plax Cascade 1000 canister filter has three trays designed to hold a wide range of filtration media, allowing you to customize your filter with practically any combination of media including biofloss, biosponges, activated carbon and others to meet the needs of your aquarium tank, irrespective of its size, kind of fish and salinity of water. A word of advice if you find the media trays to be slightly smaller than other brands, you could try packing some floss on the sides of one of the trays to increase the quality of mechanical filtration this shouldn't be too much of a problem, since the very idea of canister filters is to be able to add more of the media that you think your aquarium needs the most. Users have experimented with everything from using two trays of floss, one of charcoal and a hang on biological filter, to simply using one tray for each kind of media, getting effective filtration for their aquarium tanks.

Ideally, as long as you manage to zero down on a combination of filter media that give you adequate mechanical, chemical and biological filtration and eliminate all kinds of organic, chemical and

particulate matter, you should be able to use the Penn Plax Cascade 1000 to keep your tank water sparkling clean. **Self-Priming Filter** The Penn Plax Cascade 1000 canister filter is designed with a self-priming pump, which makes it super easy to restart the filter after a power interruption, or if it has been disconnected for cleaning or replacement. A word of caution there seem to be mixed reviews about the quality of the self-priming while most users were either able to start the filter almost immediately, a few struggled to get the priming right, mostly because of an error in following the installation manual. In any case, this can be easily avoided if you give the manual a thorough read, and make sure all the tubes and hoses are connected the right way. In addition, the Penn Plax Cascade 1000 has an easy pushdown button which eliminates the need for manual siphoning of water to get the pump working, making it a hassle-free pumping experience. **Easy Installation And Maintenance** This is probably the one feature that stands out more than the others the Penn Plax Cascade 1000 canister filter is practically a plug-and-play setup. It comes neatly packaged with all the components in place, and users have been pleasantly surprised to open the box and find a piece of equipment that is made with sturdy plastic, making it last longer than some of the flimsier models in the market. Every single valve, hose, tube is made from high-quality material, giving your canister filter a long life and giving you some great value for your money. Once installed, the sturdy rubber-mounted rubber base keeps the Penn Plax Cascade 1000 standing strong, without the risk of tipping over.

For the price it comes for, this canister filter has also managed to woo its users with the quality of the components of this filter like clasps, valves and latches, putting them at par with other high-quality but expensive brands in the market. Most importantly, customers are happy with the fact that the media trays in the Penn Plax Cascade 1000 are big, and can be customized with media of their choice, making this a great product for aquariums of different kinds. **What To Lookout For** Some users of the Penn Plax Cascade 1000 complained that the self-priming pump can be an issue, requiring the pump to be primed manually instead. In a few cases, however, users realized this was a result of not having followed manual instructions correctly. In any case, even the users who had to return their filter because of poor priming were happy to receive better-performing replacements in a short time, and are happy with the new product. Source chewy.com The one thing that Penn Plax does differently is that it offers a three-year warranty on your filter, as opposed to the lifetime limited warranty offered by other brands. But then again, with a product that is as sturdy, you won't have to worry about major replacements for a long, long time. You should be willing to spend time setting this up by following instructions perfectly, but it starts to filter your tank water to make it crystal clear, it'll be worth every minute spent. After all, it's about keeping your fish healthy and happy, and there's little else that beats the joy of a tank full of colorful, healthy fish darting from one corner to another, is there. Create one here. The Penn Plax Cascade canister filters have absolutely exploded in the. The Cascade 700 is rated for an aquarium of up to 65 gallons and has a 4 Feb 2017 7 Nov 2018 Penn Plax Cascade series include 5 models Cascade 500, 700, 1000, 1200, 1500 used for different aquariums up to 200 gallons.

They are 7 Dec 2016 A canister filter allows you to conceal your aquarium filter, exposing only your intake and outflow tubes. 22 Aug 2015 penn plax cascade manual penn plax cascade 700 manual penn plax cascade plax cascade 700 canister filter manual penn plax cascade 400 manual penn Detailed instructions for Cascade brand filters. We carry a large selection and the top brands like Tetra, Hagen, and more. Find everything you need in one place. I am using it in a small tank for a tiny red eared slider turtle. I was previously using a standard fish aquarium filter and was having to clean this tank which only has about 3 gallons of water in it constantly. The Penn Plax Cascade 700 Canister Filter is a heavy-duty multistage external filter for fresh or salt water aquariums. The Cascade 700 Canister Filter can handle aquariums up to 65 gallons efficiently providing up to 185 gph of flow. Skip

navigation Sign in. Search. Loading Close. This video is unavailable. Of course it worked because by having both hoses in the water when hand pump priming, pressure on each side of the hand pump is equalized and cannot move water, by removing the out flow end out of the water the hand pump now has the hydraulic advantage of unequalized pressure and can now pump water against air and therefore prime. I have a PennPlax Cascade 1200 canister filter on my 90 gal tank. The filter leaks where the lid clamps onto the canister. A canister filter allows you to conceal your aquarium filter, exposing only your intake and outflow tubes. 7 Nov 2018 Penn Plax Cascade canister filter assembling manual Cascade 1000 FR 265 GPH for tanks up to 100 gal. The bacteria digest waste, excess food and harmful ammonia and nitrates. The Penn Plax Cascade Canister Filters are constructed for easy setup and use.

This durable aquarium filter is equipped with quickdisconnect tubing connectors that can also control the filter's flow rate. Cascade 1000 Canister Filter Review. I have to hand it to Penn Plax, this unit operates to capacity much as they advertised. Cascade Canister Filters from Penn Plax offer heavy-duty multistage external filtration for your fresh or salt water aquarium. The Cascade 700 Canister Filter can handle aquariums up to 65 gallons efficiently providing up to 350 gph of flow. A variety of filter media contained in separate baskets allows you to customize Cascade 700 Filter Manual Read and compare experiences customers have had with Cascade products. I have now been using 2 of the Cascade 700 filters for around 18 months. Creators are allowed to post content they produce to the platform, so long as they comply with our policies. After years of working with animals large and small, she combined her expertise from the pet industry with her love of writing, and began her career as a pet writer in 2006. Things You'll Need PennPlax canister filter This provides additional aeration for your tank. When starting your filter for the first time, you may hear some noise coming from the canister. This noise will cease as soon as all of the air has been pushed out of the canister. A variety of filter media contained in separate baskets allows you to customize your filtration for your tank. Prior to purchasing a canister filter for your aquarium, choose a model that will provide adequate filtration. If this is your only source of filtration, look for one that will turn your water four times per hour. This means, if you have a 50-gallon aquarium, you will want a filter that pumps 200 gallons per hour. Begin with canister. Open the lock clips and lift clips, and lift the motor off of the canister. Lift the filter basket handles to insert filter media. Since your aquarium water will be filtered from bottom to top, place the coarse filter pad and carbon in the bottom basket.

Depending upon the filter media you have chosen, stack them in the filter baskets accordingly, from coarsest on the bottom to the finest material on top. Rinse thoroughly. Install the seal ring, connector and cover grid on top of the baskets. Replace motor unit and secure clips. If you choose to use a spray bar, attach it to the exhaust hose. Attach the flexible tubing to the intake and exhaust hoses, and to the corresponding valves on the canister. Water will flow from the aquarium into the filter. After about 30 seconds, plug in the filter and turn it on. Ensure the flow control levers are open fully. A canister filter allows you to conceal your aquarium filter, exposing only your intake and outflow tubes. Detailed instructions for Cascade brand filters. Based on work at subtlepatterns.com. If you buy something through our posts, we may receive a commission at no extra charge to you. See our full disclosures here. They are the most popular external canister filters on the market today because of their powerful features and very affordable prices. This review will cover all powerful features of this series as well as provide you the method to set up and maintain the filters in the proper way. Cascade 1000 FR 265 GPH for tanks up to 100 gal. Cascade 1200 FR 315 GPH for tanks up to 150 gal. Cascade 1500 FR 350 GPH for tanks up to 200 gal. Penn Plax Cascade series canister filters efficiently provide powerful water flow and multistage external filtration system, which really get the job done. The filters are designed to be utilized on both fresh or salt water aquariums. Its color is cobalt blue and looks great next to any tank. The flow rate is high enough to constantly keep the water circulated and filtered that ensures any toxic fish wastes are transferred. There are

control valves for adjustment of the flow rate to perfectly fit your aquarium sizes and fish types.

The control valves are also used for shutting off the water flow for maintenance easy without leak and mess. MultiStage And Quiet Filtration The product comes with startup filter media, in addition to large filter trays. There are many baskets for containing filter media that makes it possible for the combining of multiple media delivering and multistage filtration. This is the combination of chemical, mechanical, and biological filtration that generates a fresh and healthy environment for aquarium creatures. Note The filter in the picture use my own filter materials, some aren't available in the product The large filter chambers, which enable you to utilize more media plus, are the most favorite feature of Cascade series. Whereby, the filter can accommodate a large amount of filter media for the better filtration and longer maintaining periods. You can use the media come with the product or choose ones as you think best for your fish tank. You can use various media combinations, in order to accomplish a wide array of filtration as your needs. This includes biosponges, biofloss, or activated carbon. The more media you use the cleaner your aquarium and the less maintenance you have to do. Easy To Set Up And Maintain Like Fluval 06 series canister filters, the installation of Penn Plax Cascade series canister filters is very simple, even easier because everything you need is accessible. Once installed, the filter works fast to keep your aquarium clean and clear. The filtering process will engage in about thirty minutes after installation and visible improvements can be noticeable less than a day. The filter features a selfpriming button on the lid for easy starting, just press the button several times until you get water flow from the intake tube going down into the filter. And then, the filter do its works to keep your aquarium clean and ideal for fish.

Moreover, Penn Plax Cascade series filters own some other wonderful features of Fluval 06 series make it easy for setup and maintenance. There are two independent directional 360degree rotational valve taps for worry free placement. Swimming poolstyle hose clamps make it easy to assemble as well as disassemble the filter for setup and maintenance easier. Flowrate control valves allow for adjustment of the flow rate or shutting it off for easy maintenance without leak and mess. The directional returns aid in suspending waste matter which enables it to be taken in by the filter, and leaving nothing but clear, fresh water. Easylift clamps make it easy to remove the cover for maintenance. Simply release the vacuum and remove the top for cleaning, changing filter media or additional maintenance. Airtight seal assures proper flow rate of the filter and allows for very quiet operation while it is working. Mounted tipproof rubber base keeps the filter in place. Pros And Cons Of Penn Plax Cascade Series Filters Very low price compared to other brands Extra easy to set up and maintain Can adjust or shut off water flow with control valves Quick and easy to prime by pushing the button selfprimer Very quiet during operation Large capacity for low maintenance High quality, durable, tipproof base Loved and praised by a lot of hobbyists. Some of the trays do not fit snug allowing some water to bypass the media. This can be easily solved by sticking filter floss into the side areas. The motor and pumping parts of the Penn Plax are sealed, you can't get inside to clean out any residual waste matter, algae, or whatever else happens to build up inside the unit. Prepare Media baskets Filtration works from the bottom up. Use floss pad and carbon bag in bottom basket. Use floss pad and coarse sponge pad in top basket. Reassemble filter Place seal ring, connector and media basket cover over top basket. Slide media basket clips into slots on sides of top basket.

Note that small opening on motor unit must align with holes on basket. Attach valves Attach valves to ports on motor unit. Attach valve with blue ring to "in" port. Attach valve with black ring to "out" port Position the filter Choose a location for the filter where it can be easily accessed for maintenance. Do not attach hoses yet. Note that hoses with valves will easily detach from motor to remain at aquarium during filter maintenance. Hose attachment Attach hose to intake tube. Use tube with blue hose ring. Attach intake tube extension and strainer. Use two suction cups to secure intake tube to aquarium wall. Exhaust hose assembly A spray bar or a directional spout as you want.

All of these equipment help to break surface water to provide oxygen exchange for your aquarium. While the directional spout creates a forceful circulating flow in any direction, the spray bar evenly distributes filtered water across length of aquarium. If you prefer to position the directional spout or spray bar above water level, use the two extra elbow connectors to connect them. It is all included. It is all included. Join our mailing list to receive the latest tips and news of our blog. SUBSCRIBE Even with the spray bar it is strong. I do not want to blow anything like gaskets. How many gallons is your tank. Which Cascade model do you use for the tank. I think you may use a model over rated for your tank volume. I've progressively found it harder and harder to detach and reattach my hose valve lock rings to my intake and exhaust ports on the canister when I remove the canister for cleaning and replacing filter media. Do you have any idea what I can do. On my last cleaning this week I could barely get the lock rings off the ports. I've been looking into a new filtration system due to this difficulty. As normal, this process is so very easy for other people who own PennPlax Cascade canister filters.

You don't need to change your current filter because you can find another Flow Control Valve Set for the filter on Amazon. I see some people have the same problem with you and they have solved it with the small replacement. Hope it help. What size do you recommend, I'm thinking about the 100 gallon just to be on the safe side. After setting it up everything worked fine until the water bar made some squeaking sound as if it didn't have enough force for it to flow smoothly. Then it just completely stoped working. Can anyone tell me what went wrong here I have a Cascade 1200 canister. It was used when I bought it. I had to order a motor gasket and a media basket joint seal. I now have those and when I tried to seal the canister, then I can't get the locking clips to close properly. I am not sure what I am doing wrong. Thank for any help you can give me Are you sure if it is for a Cascade 1200. Could you send me a link where you buy it. I find a replacement oring on Amazon Hope it can help you. I don't know the output water flow after adjusting to the minimum flow rate and adding filter materials. Commonly, for freshwater species, you should ensure that the final flow rate isn't higher than 4 times of your aquarium capacity I has become more than a struggle to get it primed when I do the maintenance. Is it there any special sequence to start it after maintenance. I follow the sequence when disconnecting as advised in the instructions, but I wonder why it does not prime correctly. All seals are fine and there is water in the canister. Help, please. The pump of the cascade canister 1200 filter is within the lid and you have to fill your canister with full of water for priming it. The fastest way, you should fill the canister with water as much as possible, then the intake hose siphons the water from your tank to fill the rest the pump inside the lid and it will start to work. Ensure that you shut off the intake valve before opening the canister filter for cleaning.

This helps to keep the water inside the hose so that it will continue to siphon when you open the valve. This ensures that there is nothing preventing the siphoning process. Help help help The cables are fully on and I can blow water through the tubes. Do you know why this is happening Press the priming button several times until you get the first water flow from your tank into your filter and WAIT for the canister to be filled. Then plug it in and the pump will start to work. Anything else, check if the motor impeller inside the lid is working properly or not. It is all included. It is all included. TurtleMad, January 10, 2013 in Habitats and Equipment I cant find anywhere to download the manual online either. Any ideas I managed to open the canister and take out the baskets and clean them but not sure how to clean the top motor part. It is such a pain in the butt to get open. Took me over 15 minutes to do so. I wish I could help with it but I really have no idea still how I did it. I will be doing a filter cleaning probably this weekend tho and if I can find an easy way I will try and explain for you. As of now I think your best bet is to have someone help you by holding the one side in as you try and open the other. Ive never had a problem with any of mine. I can help you if I have a better idea of where youre having issues. If you are having different issues let me know. Lift out the baskets of media and throw away the floss. You can reuse the course sponge if you clean it really well. I wouldnt use hot water to do this because there is beneficial bacteria in the sponge. you

want to keep them, just rinse out the goop really well. I do replace the coarse sponge every other cleaning. The middle basket gets multiple layers of floss until it's full. The top basket gets a layer of floss, a carbon packet, and another layer of floss. This may sound like a lot but turtles are not fish. They are very dirty.

Setting up my filters this way has worked perfectly for my tanks, for years. I fill it with water, slosh it around and dump it multiple times until goo stops coming out. Then I fill the canister, with the clean media in it, until it's nearly full. Place the top motorized part back on and clamp it. Reattach the hoses. Don't plug it in yet. Press the prime button a few times until it starts siphoning water into the canister to fill it the rest of the way up. When you stop hearing the siphoning you can plug in the canister. Here is where it helps to have someone help you. I have my husband hold a bucket under the output to catch the first minute of water coming back out of the canister so it doesn't go into the tank. That's it, you're done. So the top motorized bit doesn't come apart for cleaning, I will just have to rinse it until water comes out clear. There wasn't much media in my filter except for a sponge and some floss and carbon bits but I have a packet of bio balls and will get more clean floss to add to it before putting it together again. Only took a few minutes to put together. I let the outflow water run into a bucket at first to allow dirty water to flow out of the motor following your advice. Added new plastic bio balls to bottom tray and reused cleaned sponges. Only took a few minutes to put together. Added new plastic bio balls to bottom tray and reused cleaned sponges. I'm glad it went smoothly for you. I have never had a problem with my filters. It's easy! Sign in here. Our payment security system encrypts your information during transmission.
